Low Friction Fabric

UNDERGARMENT
Slip on - Brief Style

To protect fragile skin on trunk from damage caused by friction and associated shear.

Instructions for use

- Latex free
- Slip-on UNDERGARMENT Brief Style

This Parafricta® undergarment is designed to protect fragile skin on the sacrum, buttocks and hips against the damage caused by friction and associated shear.

- Helps to prevent, and aid in the healing of, pressure ulcers and friction lesions.
- Aids the retention of wound dressings by preventing "rucking-up" as the patient moves.
- Is particularly useful for patients repeatedly slipping down the bed or chair, leading to friction damage and for wheelchair users.
- Cotton-lined gusset for comfort.
- Can be used in a clinical or home setting.
- Is easily removable to inspect vulnerable skin.
- Can be washed and reused.

Select a size according to the table that fits comfortably, based on the measurement of the hips and waist. Go first by the hip size closest to the user's if in doubt which size to select.

If it is difficult for the user to get the slip-on undergarment on or off, consider using a Velcro® closure undergarment.

Change to a clean undergarment if there is any soiling, or according to clinical judgement.

Incontinence pads may be worn with the undergarments but should not be retained in place with the undergarment alone.

Parafricta® undergarments should be washed alone or with minimal other washing on a hot (60°C), synthetics cycle in a domestic washing machine. Follow the laundry instructions on the care label.

In a hospital laundry the undergarments may be washed as for bed linen on a setting that includes 70°C for 10 minutes (sanitising cycle).

Some crinkling of the outer fabric on the back of the undergarment may occur after several washes. This does not affect the performance of the product.

Heavily soiled items may be pre-soaked in a proprietary oxidising stain remover (not domestic bleach).

Dispose of if there is heavy soiling not removed by washing, if there are any signs of seam failure or any damage to the lining fabric.
